PAF® helps your organisation to be effective and efficient

Accessing the highly accurate address and Postcode information in Royal Mail's Postcode Address File (PAF) helps organisations:

- Provide a more efficient and professional service to customers
- Convert more online sales and reduce the risk of fraud
- Optimise planning and resource allocation
- Save time and money

Watch the PAF video ›

It's easy and affordable to use our addressing products

A wide range of cost-effective licensing options are available, starting from as little as £2.80 per postcode area. You can also source PAF data directly from Royal Mail, or talk to a Solutions Provider. Just choose the option that's right for you.

The Public Sector Geospatial Agreement

Providing the public sector access to our world-leading geospatial data

What is the Public Sector Geospatial Agreement?

The Public Sector Geospatial Agreement (PSGA) sets out how Ordnance Survey (OS) provides world-leading location data and expertise to the public sector across Britain. It supports the delivery of critical infrastructure and services, as well as working to help protect our environment.

Register for the Public Sector Geospatial Agreement | OS

What are the benefits of joining the PSGA?

The PSGA membership gives you access to our expertise and location data for the public sector across Britain.

- Access unlimited OpenData and Premium data through the OS Data Hub
- Join OS data with your own datasets to improve how our data works with yours
- Share OS data with other PSGA members and third parties such as community groups and contractors
- Get support from OS' experts and technical resources to help maximise the benefits of using OS data

Free Our Data: Make taxpayers' data available to them

What's it all about?

On March 9 2006 the Guardian's Technology supplement carried an article called "Give us back our crown jewels". The argument is simple: government-funded and approved agencies such as the Ordnance Survey and UK Hydrographic Office and Highways Agency are government-owned agencies; they collect data on our behalf. So why can't we get at that data as easily as we can Google Maps or the Xtides program?

Even though OS and the UK Hydrographic Office are designated as trading funds (which means that they operate as self-contained commercial entities receiving no direct tax funding), substantial parts of their income - up to 50% in the case of OS - comes from the public sector; meaning, in effect, they are part-paid by taxes. Yet they charge for that data, with onerous copyright restrictions that prevent the re-use of the data.

That restricts innovation and artificially restricts the number and variety of organisations that can offer services based on that most useful data - which our taxes have helped to collect.

Making that data available for use for free - rather as commercial companies such as Amazon and Google do with their catalog and maps data - would vastly expand the range of services available. It cannot make any sense that Google, an American organisation, is presently more popular with people aiming to create new map applications.
More questions? Why not read the frequently asked questions.

What can you do?

In the first place, lobby your MP; ~~lobby your MEP about the Inspire plan (read this article from The Guardian in the Free Our Data campaign~~ (Inspire is now part of European law, but has not been passed into British law); you could join the Public Geodata campaign too). You could subscribe to the blog; and add your own comments there too.

Campaign blog

We'll aim to have news, opinions, strategies, and the latest thoughts and information from the campaign here. You can get the RSS feeds on the page. (Confused? Read What's an RSS feed and why can it help me?)

Links

Other people have had the same problems; some have succeeded in overcoming them. This by no means exhaustive set of links aims to be a pointer.

Contact

If you'd like to help by providing technical expertise (which could include layout tips..), or want to tell us about your experiences, you can contact Charles Arthur or Michael Cross (who jointly wrote the original article). You can reach Charles Arthur via the Guardian: the switchboard number is +44 (0) 20 3353 2000.

Show Us a Better Way

Tell us what you'd build with public information and we could help fund your idea!

What would you create with public information?

Ever been frustrated that you can't find out something that ought to be easy to find? Ever been baffled by league tables or 'performance indicators'? Do you think that better use of public information could improve health, education, justice or society at large?

The UK Government wants to hear your ideas for new products that could improve the way public information is communicated. The Power of Information Taskforce is running a competition on the Government's behalf, and **we have a £20,000 prize fund to develop the best ideas to the next level.** You can see the type of thing we are are looking for here.

To show they are serious, the Government is making available gigabytes of new or previously invisible public information especially for people to use in this competition. Rest assured, this competition does not include personal information about people.

We're confident that you'll have more and better ideas than we ever will. You don't have to have any technical knowledge, nor any money, **just a good idea, and 5 minutes spare to enter the competition.**

Go on, **Show Us A Better Way**.

Latest News

New information unlocking service

We have been so busy approving your brilliant ideas that we neglected to post about the excellent new information unlocking service run by OPSI.

A common refrain from online experts on government data is "*just let us at it*". Well government has been listening.

Amongst all the other interesting things going on at OpenTech OPSI very quietly announced their new data unlocking service.

The proposition is simple. If you have any problems accessing public information then you contact OPSI. The way their service works is:

About This Site

The Power of Information Taskforce is helping government become more open, transparent and effective through better use of published information.

This competition is asking for your help in developing better ways to publish the vast swathes of non-personal information that the government collects & creates on your behalf

Public data is your data. Tell us what you'd build with it and you could win £20k to develop your idea to the next level.

Latest News

Alfred Ernest Marples, Baron Marples of Wallasey loves postcodes and thinks you should do too.

Your postcode?
How do you like it? Just testing Go

What's this all about eh?

Post codes are *really* useful, but the powers that be keep them closed unless you have loads of money to pay for them. Which makes it hard to build useful websites (and that makes Ernest sad).

So we are setting them free and using them to run PlanningAlerts.com and Jobcentre Pro Plus. We're doing the same as everyone's being doing for years, but just being open about it.

Hopefully the Government and Royal Mail will realise the value of this service and license us to offer it officially and for free. If not, and this website gets shut down, we'll close the websites we've made that make use of this site's lookup service. Permanently.

Where's the data coming from?

We're not saying. But, just to be clear: we don't hold a copy of the postcode database ourselves, neither in complete form nor as part of a cache.

Who made it or supports it?

This website was built by Harry Metcalfe and Richard Pope, in their capacity as the Directors of Ernest Marples Postcodes Ltd.

Ernest who?

He's the Postmaster General who introduced the Postcode.

Policy paper

Budget 2016

Updated 16 March 2016

This was published under the 2015 to 2016 Cameron Conservative government

Contents

1. Executive summary
2. The UK economy and public finances
3. Support for working people
4. Backing business and enterprise
5. Opportunity across the UK
6. A devolution revolution
7. Policy decisions
8. Annex A: Financing
9. Annex B: Office for Budget Responsibility's Economic and fiscal outlook

1. Executive summary

This is a Budget that puts the next generation first. In uncertain times and against a deteriorating global economic outlook, this Budget delivers security for working people. It takes the next bold steps in the government's long-term economic plan. It reduces the deficit, achieves a surplus and makes the reforms needed so Britain is fit for the future.

The UK is forecast to grow faster than any other G7 economy this year, with employment at record highs, but with productivity growth weaker than forecast. So this Budget sets out long-term solutions to long-term problems and invests in the education, builds the infrastructure and supports the savings of the next generation.

In this Budget, the government will take action to:

- provide up to £5 million to develop options for an authoritative address register that is open and freely available – making wider use of more precise address data and ensuring it is frequently updated will unlock opportunities for innovation

industry levy

- support working people with a £11,500 personal allowance and a £45,000 higher rate threshold
- back savers with a new flexible Lifetime ISA for young people and a higher ISA limit for all

Lord Clement-Jones' amendment, After Clause 142

Data Protection and Digital Information Bill

Committee stage

Amendment number: 252

Lead member

Lord Clement-Jones

Liberal Democrat, Life peer

Decision

Not moved

The amendment was not moved. The House was not invited to take a decision on it (though it may have been debated with other amendments).

Amendment text

After Clause 142

insert the following new Clause—

"Open address file

(1) The Secretary of State must regularly publish a list of UK addresses as open data to an approved data standard.

(2) "Regularly publish" means on at least a monthly basis.

(3) "UK addresses" means an authoritative list of UK address data as maintained by local authorities including, but not limited to —

(a) building number, name and street address,

(b) geographic coordinates, and

(c) a unique identifier.

(4) "Open data" means data under a licence whereby any person can freely access, use, modify, and share the data for any purpose, subject, at most, to requirements that preserve provenance and openness.

(5) "Approved data standard" means such written standards, containing technical specifications or other requirements in relation to the data, or in relation to providing or processing the data, as may be published by an appropriate authority from time to time."
